Easter Lilies are a popular plant this time of year. For those reasons and more, many Easter Lilies are forced to bloom early in the year. According to the U.S. Department of Agriculture (USDA) Agricultural Research Service’s (ARS) Agriculture and Forestry Research, the Easter lily is native to the southern islands of Japan and China. They are usually grown in the United States and Europe by forcing the bulbs across the globe; Japan was the top exporter of Easter lilies in 2019, according to the World Trade Organization.

The cultivation process for Easter lilies begins with the selection of the berries. The berries are then placed in a room with a controlled environment and conditions, such as temperature, humidity, and light, to induce the growth of roots and shoots. The lilies are then transplanted into soil and allowed to grow for several weeks before being forced to bloom. The forcing process involves exposing the lilies to a cooler temperature and lower light levels, which stimulates the production of flower buds. The lilies are then placed in a room with a controlled environment to ensure optimal flowering.

Once the lilies have bloomed, they are harvested and replanted each year for three to four years until they reach the right size and are ready to be cut and brought to commercial greenhouses.

Easter Lilies are a popular choice for flower arrangements and are commonly used in Easter celebrations. They are also a symbol of the resurrection and new life.

When selecting your Easter Lilies, choose plants that have a dense foliage along the entire stem. The plant should be about twice as tall as the pot. Look for plants that have lots of buds in different stages of development with a few flowers opened to extend the blooming period. Additional Lilies should plant early to allow for drapery and excess heat in your home. They prefer temperatures between 65 and 75°F. Water the soil so that it feels dry to the touch. Be careful not to overwater or underwater the lilies in water. When watering, remove the pot from the pot to remove excess soil. Stop watering as the excess water. Place the pot in the sink and let the excess water drain. When selecting your Easter Lilies, choose plants that have no steps, non-smoking. Contact bedroom $460. All utilities paid, CLEAN BUILDING, nice neighborhood. FOR RENT: FRESH CLEAN 2 BEDROOM APARTMENT FOR LEASE. Call Deb at 701-710-0429.
